DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, 10-15 and 20-24, drawn to an optical semiconductor package, classified in class 257, subclass 678.
- II. Claims 6-9 and 16-19, drawn to a method for manufacturing an optical semiconductor package, classified in class 438, subclass 106.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the group I invention could be made by a materially different process. For example, partially encapsulating the chip and bonding wires up to the supporter, opening the window on the supporter corresponding to the optical element of the chip, and then completely encapsulating material to form a package body for fixing the window, instead of providing a supporter, disposing a window on the supporter, positioning the window corresponding to the optical element of the chip and then forming an encapsulant on the substrate for fixing the window and encapsulating the chip and the bonding wires.

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
